

Blended Learning Classroom

The Blended Learning Classroom combines synchronous and asynchronous learning activities in one cohesive space for students. Learning is occurring in different ways with students receiving lectures virtually while at home or other locations outside of the classroom. Student teams then come together for group break-out activities. In this setting, you see spaces for active collaborative learning and also the use of modern-day study carrels where focused work can take place with special technology needs met in the Amobi setting.

- Amobi Desk
- Amobi Team
- Bixby Lite Work
- Zilo
