

# Schindler Service for E&I members

## Schindler's national service portfolio includes all leading brands

It may surprise you to know a significant percentage of our existing service base is non-Schindler equipment.

## Extensive technical training

Every year our technicians receive more than 50 hours of training to keep their skills sharp and current. They're trained to service equipment built by Schindler as well as all other leading brands.

**50+** Hours of training

## Local service with world-class support

Only a leading company like Schindler, customer focused and technology driven, can bring decades of global mobility experience to your building.

## Remote monitoring: How it works

When a change in equipment performance is detected, remote monitoring automatically reports the issue to the Schindler contact center so a technician can be dispatched. The system also sends the technician intelligence and diagnostics to help turn your equipment to service faster than traditional troubleshooting.
